

Safety is Everyone's Responsibility

When to call:

If there is a fire, if you or your parents are hurt, or if you need EMERGENCY help for any other reason.

What they might ask you:

- Your name and address
- How old you are
- What's wrong / why you are calling
- Your parents names

Remember to stay calm...help is on the way!

Are there any hazards around your Home?

It's easy to want to play games in the house. But certain types of games, like running games, are best left for outside. It's just way too easy to slip and trip, and too many corners and ledges for you to hit your head on. Take a trip to any emergency room on any night of the week and you'll find kids who need stitches because they were running inside the house. Ouch. Even worse, many kids have died from it. So never run or rough-house indoors. I know it's hard... We were kids once too. But it sure beats a hospital visit!

Keeping things neat and tidy = SAFE

Are your friends acting UNSAFE?

At some point in your life you may be around a friend who wants to do something dangerous-like play with fire. It might be hard to do, but if this ever happens you need to stop playing with them IMMEDIATELY and go get an adult. This isn't tattletale telling-it's being a good friend. You need to do it because you care about them. They are doing something dangerous that could kill them... and it could kill you too! You wouldn't be a very good friend if you DIDN'T find some way to stop them.

If they won't stop, tell Somebody

Always Think Before YOU Act!

Most kids know to look all ways when crossing the street. But sometimes they forget... like when they're chasing after a ball. Don't chase that ball! You are much more important than it is. It will either safely roll to the other side, or a car will hit it. Either way, if you're there with it, the car will hit you too! So it's important to remember: stop! Watch where it rolls, and then carefully cross to go get it or have an adult help you. Don't just chase it out into the street. Can you remember that?
